

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Claims 1-23. (canceled)

Claim 24. (currently amended) A server apparatus connected with a transmitting facsimile apparatus and a receiving facsimile apparatus via the Internet, the server apparatus comprising:

a memory configured to store capabilities regarding facsimile data that the receiving facsimile apparatus can receive, the capabilities being distinct from the facsimile data; and

a controller configured to receive facsimile data from the transmitting facsimile apparatus, to transform the received facsimile data into a type of facsimile data that the receiving facsimile apparatus can receive, based on the capabilities stored in the memory, and to transmit the transformed facsimile data to the receiving facsimile apparatus.

Claim 25. (currently amended) The server apparatus according to claim 24, wherein a capability regarding a facsimile data is a type of file data that the receiving facsimile apparatus can receive.

Claim 26. (previously presented) The server apparatus according to claim 25, wherein a type of file data is at least one of MH, MR, MMR and JPEG.

Claim 27. (currently amended) A server apparatus connected with a facsimile apparatus via the Internet, the server apparatus comprising:

Modified

Huffman

a memory configured to store capabilities regarding facsimile data that the facsimile apparatus can receive, the capabilities being distinct from the facsimile data;
and

a controller configured to receive, from the facsimile apparatus, an e-mail with a predetermined address, the e-mail indicating the capabilities of the facsimile apparatus to be stored in the memory, and to store the capabilities of the facsimile apparatus in the memory.

Claim 28. (currently amended) The ~~Internet facsimile~~ server apparatus according to claim 27, wherein the controller determines whether or not the e-mail address is the predetermined address, and in response to a determination that the e-mail address is the predetermined address, stores the capabilities of the facsimile apparatus in the memory.

Claim 29. (currently amended) An Internet facsimile apparatus connected with a server apparatus via the Internet, the Internet facsimile apparatus comprising:

a communicator configured to communicate with a server apparatus via the Internet; and

a controller configured to transmit to the server by e-mail, capabilities regarding facsimile data that the Internet facsimile apparatus can receive, the transmitted e-mail having a predetermined address, the e-mail indicating the capabilities of the Internet facsimile apparatus to be stored in the server apparatus.

Claim 30. (currently amended) A communication terminal capability exchanging method comprising:

storing capabilities regarding a facsimile data that a receiving facsimile apparatus can receive, the capabilities being distinct from the facsimile data;

receiving facsimile data from a transmitting facsimile apparatus;

transforming the received facsimile data into a type of facsimile data that a receiving facsimile apparatus can receive, based ~~in~~ on the stored capabilities; and

transmitting the transformed facsimile data to the receiving facsimile apparatus.
